

CAPABILITY BRIEF · INDEPENDENT PROGRAM GOVERNANCE & TECHNICAL OVERSIGHT

Mission Assurance

Independent program governance, schedule, and technical oversight for the federal programs that cannot fail — structurally separated from delivery, with no stake in any answer but the right one. Federal prime performance since 2018; continuous NBIS support since 2019.

YEARS ON NBIS

THE INDEPENDENCE STANDARD

CACG does not deliver what it oversees. No systems-development or integration contracts on the programs it governs — only independent judgment. Organizational Conflict of Interest exposure is actively managed and codified in CMMI Level 3-appraised processes. Primary customers: **DCSA** and **DISA**. The government's only cost is the insight that protects the mission.

CORE ASSURANCE DISCIPLINES

What mission assurance looks like in practice

01 GOVERNANCE & DECISION INFRASTRUCTURE

Program Governance & Oversight

Governance boards, executive briefings, decision forums, and documentation frameworks. CACG owns the governance infrastructure so program leadership can focus on mission outcomes — with status reporting, action tracking, and risk-escalation protocols calibrated to each program's operating tempo.

Governance Boards

Decision Forums

Risk Escalation

02 CRITICAL-PATH ASSURANCE

Integrated Master Schedule Analysis

Independent development, maintenance, and analysis of Integrated Master Schedules for complex multi-workstream programs. CACG identifies critical-path risk, float erosion, and dependency conflicts before they become execution failures — in formats consumable by technical, program, and executive audiences.

Schedule Risk

03 INDEPENDENT SETA / ITA

Systems Engineering & Technical Assessment

SETA support across the full program lifecycle — requirements analysis, architecture review, test planning, integration oversight, and transition. CACG provides independent technical assessment of contractor deliverables, performance against requirements, and readiness for milestone events.

SETA

ITA

Milestone Readiness

04 REQUIREMENTS TO AWARD

Acquisition & Budget Analysis

Independent support to acquisition planning, requirements development, market research, cost estimation, and contract documentation — bridging technical requirements and acquisition strategy. Covers SOW/PWS development, CDRL structuring, and milestone decision preparation.

SOW / PWS

CDRL

Cost Estimation

ASSURANCE APPROACH

Independent baseline to decision support

01

Independent Baseline

Establish an objective program baseline across schedule, cost, technical, and risk — independent of any delivery interest.

02

Governance & Oversight

Stand up and run governance boards, decision forums, and documentation frameworks so leadership can focus on the mission.

03

Risk & Schedule Assurance

Continuously track risk and critical path; surface float erosion and dependency conflicts before they become failures.

04

Decision Support

Deliver decision-ready assessments calibrated to technical, program, and executive audiences — early enough to matter.

CPARS ACROSS NBIS PORTFOLIO

INDEPENDENCE & GOVERNANCE POSTURE

Structural Independence

No delivery, integration, or systems-development contracts on programs CACG oversees.

CMMI Level 3 Appraised

Governance and assessment processes formally appraised — repeatable and auditable.

Active OCI Management

Conflicts disclosed proactively; engagements declined where objectivity would be compromised.

DoD Cleared Facility

Facility clearance and cleared staff for sensitive and classified program environments.
